

## Manage Your Encrypted SafeToGo USBs for a Mobile, Global Workforce

SafeToGo makes it simple to secure data for transport, storage and sharing. Now SafeConsole allows you to centrally manage SafeToGo devices, no matter where they go.

SafeConsole is ideal for mobile employees that are handling sensitive data or intellectual property in multiple locations. SafeConsole allows you to administer hundreds or thousands of encrypted SafeToGo USBs with efficiency, visibility and control.

### Selected Features at a Glance

**Inventory.** Monitor all your SafeToGo USBs, including their location anywhere in the world. Integrate with Active Directory to track users, assigned devices and connected computers with ease.

**Audit.** See which files are saved to or deleted from your encrypted SafeToGo at any given moment. Use a complete audit trail to monitor activity by user, including connections, login failures, resets and loss reports.

**Control.** Enforce policies, such as password rules, file-type restrictions or geographic boundaries, across multiple SafeToGo

USBs. Reset passwords, switch USBs into read-only mode, and even remotely wipe them in case of loss or theft.

**Report.** Gain a big-picture view of your organisation's SafeToGo USBs across the globe. Access reports by configuration, geographic location, status, updates, recent activity and more.

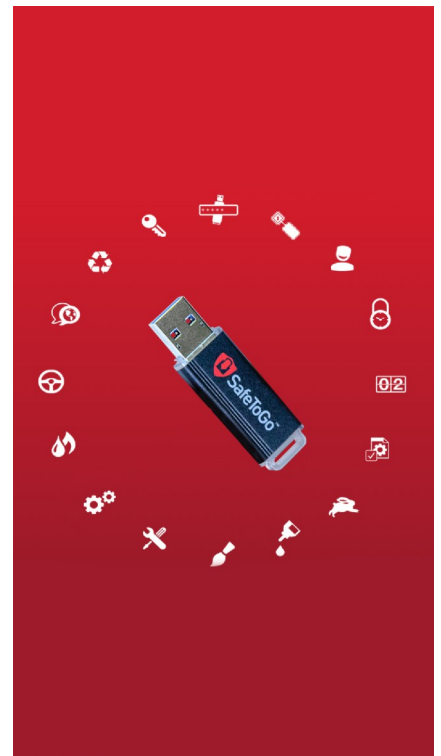

### Geolocation and Geofencing

Use IP-based location tracking to pinpoint the exact location of your SafeToGo USBs anywhere in the world. SafeConsole can also 'geofence' your devices, making them accessible only within specific geographic boundaries.

### Easy and Rapid Deployment

SafeConsole offers an easy roll-out scheme for small and large organisations with connection to LDAP (AD) option.

Administrators can authenticate to access SafeConsole with their AD credentials. Install SafeConsole on your server, then deploy drives to users. Each device is registered to a specific user in SafeConsole and linked to the user in the corporate directory (if available). The all-in-one installation has the power to serve large device deployments in the thousands if required.
